

PROPOSED ELECTRIC VEHICLE (EV) CHARGING POINTS FOR GULLANE

After considerable discussion with ELC the attached plan shows the location for the EV charging point which is to be installed by April 2020.

The Plan

It formalises the bays on Saltcoats Road with markings which make more efficient use of the existing space currently often used by only 12 vehicles so that 13 vehicles (including 2 EVs) can fit in. These bays will be generously sized bays (2.9 m) as opposed to little more than 2.4 m wide bays, which is the absolute minimum width for a nose-in parking bay.

There will also be join-ups of two existing areas of hard standing on Brighton Terrace, with material reclaimed from Saltcoats Road thus adding capacity for at least one more vehicle to make up for the overall loss of 1 bay on Saltcoats Road.

The visual and practical impact will therefore be minimal and will remove the unsightly damaged grass in the Brighton Terrace area.
